## FOREWORD

Significant changes have taken place in the program of physical education during the past twenty years. Among these changes we may point to an increase in facilities and time allotment, to a more adequate preparation of teachers, and to a more scientific approach when problems are attacked. Teachers are planning programs based upon the latest scientific information available, thus assuring better results in physical education. Progress, to a considerable extent, has been due to provision of and improvement in measuring and evaluation devices.

The need for more accurate measures of pupil achievement in physical education activities is apparent. A review of the literature on measurement in physical education indicates a special need for achievement scales in the great variety of activities which form the working tools of the profession. Achievement scales set up according to scientific, statistical procedures will be of invaluable assistance to administrators and teachers in promoting a purposeful program because they provide useful information about the capacities and abilities of pupils.

This study has been made with great care, and represents a valuable addition to our present set of measuring instruments. It has been a project in which more than 79,000 boys and girls have been tested in the various events. The results of this study, made possible through cooperative effort, are commended to all, as they bring to the profession accurate and objective tools comparable to those applied to other school activities.

*Superintendent of Public Instruction*

*State of California*

## PREFACE

The measurement of achievement in physical education activities is essential to an efficient program of instruction. Teachers cannot arbitrarily decide how much children with different characteristics should be able to achieve but they may obtain this knowledge from the actual achievement of classified groups of pupils measured in accurate units of some sort. Briefly, there is need for a series of scientifically determined achievement scales to serve the following purposes:

1. To stimulate pupils to have an interest in all-round physical development;
2. To interest pupils in their play through a fair evaluation of their efforts;
3. To supplement the routine physical examination by finding pupils' strengths, weaknesses, and skill status so that an activity program may be adapted to their needs;
4. To measure pupils' improvement in skills; and
5. To aid in further research and experimentation in the physical education field.

Many attempts have been made during the last few years to devise scoring tables (achievement scales) for various types of individual athletic events. Scoring tables in different activities have been constructed by an arbitrary assignment of points for pupil performances. Most of these tables assign varying values for performances according to the pupil's age, height, weight, or combination of these factors. These attempts have been based upon the opinions and judgments of men and women with considerable experience, but in the main have not given thoroughly satisfactory results. The chief criticism of most scoring tables in physical education activities is that they have been constructed arbitrarily and without regard to what the pupils can really do. Scores given for performances in different activities have been added without reducing them to a common denominator or using the same type of unit of measurement. The actual performance of pupils is the only reasonable basis for determining achievement scales in physical education activities.

Soon after the publication of *Physical Education for Elementary Schools*,<sup>1</sup> the need for building a new testing program, similar to the California decathlon program in objectives but different in technical construction, became evident. A review of the above named volume

---

<sup>1</sup> N. P. Neilson, and Winifred Van Hagen. *Physical Education for Elementary Schools*. New York: A. S. Barnes and Company, 1930 and 1932.

indicated there were more than sixty activities of the individual athletic event type listed for grades five, six, seven, and eight for which scientifically constructed achievement scales could be developed. After further study of these activities, the decision was made to reduce the list to thirty-three activities for boys and twenty activities for girls. A study using data furnished through the courtesy of the Los Angeles and Sacramento city school systems, proved that the classification scheme presented in the book *Physical Education for Elementary Schools* possesses a high degree of validity.

Before making arrangements with several school systems to have the tests given to pupils in grades five, six, seven, eight, and nine it was necessary to prepare a set of materials. These materials included a statement concerning the purpose of the project, a list of the events, general instructions on testing, and the description and testing procedure for each of the thirty-three events to be used. The descriptions of events and testing procedures to be used in giving each of the tests are, therefore, identical with the descriptions and testing procedures used in the collection of data from which the achievement scales were arranged.

The use of differently colored record sheets for boys and girls allowed the boys' and girls' records to be quickly segregated. These record sheets contained blanks in which were written the name of the school, the city, name and number of the athletic event, and the month in which the tests were given. In table form and opposite the name of each pupil were written his date of birth, grade in school, height, age, weight, classification, first trial, second trial, third trial, and best trial. Instructions were given to leave the age, classification, and best trial columns blank so the authors could fill in these columns and thus save those who gave the tests a considerable amount of work.

Record sheets, instructional booklets, descriptions of the events and testing procedures for the events were furnished to those who gave the tests. A great deal of ingenuity had to be exercised in making assignments so that more than enough records would not be secured in some events, too few in others, and so that the schools' choice of events would be respected as far as possible. Data for pupils in grades five and six were secured by supervisors assisted by teachers in the elementary schools, and data for pupils in grades seven, eight, and nine were secured by physical education teachers in junior high schools. All records were taken between May 1, 1933, and March 1, 1934.

Without the interest and fine spirit of cooperation of many educators in the field, this project could not have been completed. We hasten, therefore, to express our sincere appreciation to all those who assisted.

Many superintendents and principals gave us permission to work in the schools under their control and for this we are grateful. Special commendation is due Miss Winifred Van Hagen for the many hours of careful work done in computing the age and classification of each pupil and in checking the best records. Appreciation is extended to Mrs. Martha D. Anderson for secretarial service in connection with the project; to Miss Irene Karshner for arranging and typing the scales; to Thomas E. Helt and Leo Leffy for laborious statistical work; to F. W. Dingwell for the drawing of illustrations; and to each of all persons who assisted through supervision or by giving the tests in local school systems.

Achievement scales objectively determined should replace types of scoring systems which are constructed arbitrarily. We are confident the program contained in this book will serve a useful purpose in stimulating pupil interest in all-round physical activity and in giving the teacher an instrument with which to evaluate objectively pupil progress in one phase of the physical education program.

CLASSIFICATION OF PUPILS

AND

HOW TO GIVE THE TESTS

---

## CHAPTER I

### CLASSIFICATION OF PUPILS

There now exist several types of scoring schemes devised to encourage athletic activity, stimulate interest in the improvement of performance, and indicate the level of achievement reached. The greatest obstacle to the perfection of these scoring schemes has been the absence of any general agreement on a satisfactory method of pupil classification which would guarantee fairness in the evaluation of performance. The entire field of achievement testing in physical education activities has awaited the validation of such a classification plan.

It is conceded that there are many factors which influence the performance of boys and girls in physical education activities. Each contestant is either favored or handicapped by these important hereditary and environmental factors. Differences exist with respect to native ability, structure, function, glandular secretions, state of nutrition, and the extent of previous training, experience, or practice in the activity in question. A list of the advantage and handicapping factors influencing performance in physical education activities would undoubtedly include such items as race, sex, chronological age, physiological age, grade in school, intelligence, weight, height, length of trunk, length of arms, length of legs, width of shoulders, width of hips, depth of chest, chest expansion, vital capacity, blood pressure, pulse rate, muscle tonus, nerve force, neuromuscular coordination, reaction time, strength, energy, speed, endurance, agility, courage, attitude, determination, interest, and experience. These factors are, of course, not mutually exclusive.

If all of the factors influencing pupil achievement in one or more athletic activities were used as an integral part of a classification scheme, differences in achievement of individuals in a classified group would be minimized. This observation leads us to believe that only those causal factors which determine capacity and which the individual cannot quickly and wilfully modify, should be used in the construction of a classification plan. The prevalent assumption is that bodily structure basically determines physical capacity, and hence the use of elements of structure for purposes of classification is sound if the elements are causal factors. For fairness in competition, the general physical capacities of the contestants should be equalized by a classification scheme.

In selecting the factors which are to be basic in a classification plan, we are for the present at least limited to those which can be quickly and conveniently measured in a practical school situation. This criterion eliminates at once such factors as native ability, general bodily functioning, peculiarities in structure, glandular secretions, state of nutrition, physiological age, blood pressure, muscle tonus, nerve force, neuromuscular coordination, reaction time, strength, energy, and agility. Application of the criterion already mentioned, i.e. that factors which can be changed rather quickly through the pupil's own decision or activity should not be used in the classification scheme, eliminates from consideration the factors of amount of training or experience or practice, vital capacity, attitude, determination, interest, and within somewhat narrower limits pulse rate, speed, and endurance. Length of trunk, length of arms, length of legs, width of shoulders, width of hips, depth of chest and chest expansion are closely related to race, sex, age, height, or weight, and are, therefore, considered to some extent at least in any classification plan embracing the latter factors. It is entirely possible to arrange achievement scales for different races of people and for either sex, thus taking care of these two traits.

Physical maturity of people is commonly judged by their age, height, and weight. These factors, employed singly and in various combinations, have been most used by physical educators when classifying boys and girls into homogeneous groups for athletic competition. Another interesting observation is that in the many different types of tests devised, arbitrarily or through experiment, to measure physical efficiency, the age, height, and weight of the individual have been considered as factors in the situation. Age, height, and weight are factors related to capacity; they change relatively slowly, and the individual within a brief space of time has little or no control over them.

The use of a single factor for classification purposes is not satisfactory and cannot be successfully defended. The use of grade in school alone favors the older, heavier, and stronger individuals as the variance in height, weight, and age within a grade is considerable. Little defense for grade as a factor exists because the grade status of the pupil may be suddenly changed as a result of the pupil's activity or the teacher's decision. Then too, were our schools to allow no failures, grade status would correlate highly with chronological age and could, therefore, be dispensed with if age were included. Age may be a crude indication of amount of experience and physical development, but there is much variability in height and weight within each age group. Classification by weight alone does not meet the criteria for fair competition because: first, it is not known how much of the weight is fat or bone, and how much is muscle; secondly, there is a wide variation in maturity at a given weight; thirdly, the temporary modification of weight by training

down is sure to be resorted to. We cannot advocate for a growing boy or girl any system of classification which puts a premium upon holding the weight static or even reducing it below normal. Height is an important factor, and more so in some events than in others because the mechanical advantage required in the several events is different.

Hence, from every *practical* point of view, it appears that height, age, and weight should be used in some combination as the basic factors in a classification device. Other factors related to performance in individual athletic events will naturally play their part in determining within a class the individual differences in achievement. The final adequacy of these three factors for classification purposes is, of course, directly proportional to their amount of influence on performance in specific activities, influence over which the performer has no control. Such influence is obvious when one considers the maximum distances possible by six year old boys and eighteen year old boys in the standing broad jump.

The following classification chart<sup>1</sup> is basic to the achievement scales found in this book. It was developed in the Oakland Public Schools as an adaptation of the California four-point classification scheme and the classification chart used in connection with the California decathlon charts, both of which were an outgrowth of Reilly's plan of rational athletics.<sup>2</sup> The authors have established the validity of the classification scheme through a research in which was found a correlation of .983 between the plan shown here and another plan set up scientifically. The scientific classification plan was based on the relative contributions which the factors age, height, and weight make to performance in a number of achievement tests classified under four fundamental play elements.

The use of the chart for classifying pupils is illustrated by the following example:

	<i>Exponent</i>
Height—57 Inches	6
Age—13 years and 2 months	7
Weight—102 pounds	9
	Sum of Exponents
	22
	Pupil is in Class D

<sup>1</sup> This classification chart is identical with the one appearing in *Physical Education for Elementary Schools*, by Neilson and Van Hagen, p. 16.

<sup>2</sup> Frederick J. Reilly, *New Rational Athletics for Boys and Girls*. New York: D. C. Heath and Company, 1917.

## Classification Chart for Boys and Girls

Exponent	Height in Inches	Age in Years and Months	Weight in Pounds	Sum of Exponents	Class
1	50 to 51	10 to 10-5	60 to 65	9 and below	A
2	52 to 53	10-6 to 10-11	66 to 70	10 to 14	B
3		11 to 11-5	71 to 75	15 to 19	C
4	54 to 55	11-6 to 11-11	76 to 80	20 to 24	D
5		12 to 12-5	81 to 85	25 to 29	E
6	56 to 57	12-6 to 12-11	86 to 90	30 to 34	F
7		13 to 13-5	91 to 95	35 to 38	G
8	58 to 59	13-6 to 13-11	96 to 100	39 and above	H
9		14 to 14-5	101 to 105		
10	60 to 61	14-6 to 14-11	106 to 110		
11		15 to 15-5	111 to 115		
12	62 to 63	15-6 to 15-11	116 to 120		
13		16 to 16-5	121 to 125		
14	64 to 65	16-6 to 16-11	126 to 130		
15	66 to 67	17 to 17-5	131 to 133		
16	68	17-6 to 17-11	134 to 136		
17	69 and over	18 and over	137 and over		

It will be noted that the teacher must know three things before a pupil can be classified by means of the classification chart, i.e., the pupil's height, age, and weight. Height taken to the nearest inch, and weight taken to the nearest pound are easily obtained. The teacher cannot always rely upon a pupil's statement concerning his age in years and months, and must, therefore, compute this item from the pupil's date of birth, which is recorded in the state school register. To compute, without error, the age in years and months for a large number of pupils is, for most teachers, a difficult and time consuming task. To increase accuracy and save time, an age chart should be constructed.

## HOW TO CONSTRUCT AN AGE CHART

The classification chart calls for a pupil's age computed to within thirty-one days. This allows the teacher to construct an age chart good only for the month in which she wishes to classify her pupils. If an age chart were needed for the month of April, 1934, the procedure used in its construction would be as follows:

*Step One.* Make a frame for the chart, writing months at the top and years at the left covering age range of pupils to be classified. Example:

*Step Two.* If a pupil were born in April, 1915, then in April, 1934, he would be 19 years and 0 months old (19-0). This is the starting point for writing in the ages. If a pupil were born in April, 1916, then in April, 1934, he would be 18 years and 0 months old (18-0). All of the numbers can now be written in the April column. Example:

Year	1	2	3	4	5	6	7	8	9	10	11	12
	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1915				19-0								
1916				18-0								
1917				17-0								
1918				16-0								
1919				15-0								
1920				14-0								
1921				13-0								
1922				12-0								
1923				11-0						10-5	10-4	
1924	10-3	10-2	10-1	10-0	9-11	9-10	9-9	9-8	9-7	9-6	9-5	9-4

*Step Three.* By the chart it will be seen that a pupil born in April, 1924, will be 10 years and 0 months old (10-0) in April, 1934. A pupil born in May, 1924, would be one month younger than if he were born in April, and, therefore, 9-11 can be written in the May column opposite the year 1924, 9-10 in the June column, etc., across to 9-4 in the December column. Next, 10-1 should be written in the March column, 10-2 in the February column, 10-3 in the January column, 10-4 in the December column, 10-5 in the November column, continuing always to the left adding one month each time until the chart is completed. Example of completed chart follows on page 9.

In a similar manner an age chart may be constructed for any month of any year. It can be used only during the month for which it is constructed. After the chart is finished, the ages of any number of pupils can be quickly found from their dates of birth. Thus, using the above age chart to classify pupils during the month of April, 1934, a pupil born in July, 1918, would be 15 years and 9 months old (15-9), a pupil born in November, 1922, would be 11 years and 5 months old (11-5), etc.

Chart for Computing Ages During April, 1934

Year	1	2	3	4	5	6	7	8	9	10	11	12
	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1915	19-3	19-2	19-1	19-0	18-11	18-10	18-9	18-8	18-7	18-6	18-5	18-4
1916	18-3	18-2	18-1	18-0	17-11	17-10	17-9	17-8	17-7	17-6	17-5	17-4
1917	17-3	17-2	17-1	17-0	16-11	16-10	16-9	16-8	16-7	16-6	16-5	16-4
1918	16-3	16-2	16-1	16-0	15-11	15-10	15-9	15-8	15-7	15-6	15-5	15-4
1919	15-3	15-2	15-1	15-0	14-11	14-10	14-9	14-8	14-7	14-6	14-5	14-4
1920	14-3	14-2	14-1	14-0	13-11	13-10	13-9	13-8	13-7	13-6	13-5	13-4
1921	13-3	13-2	13-1	13-0	12-11	12-10	12-9	12-8	12-7	12-6	12-5	12-4
1922	12-3	12-2	12-1	12-0	11-11	11-10	11-9	11-8	11-7	11-6	11-5	11-4
1923	11-3	11-2	11-1	11-0	10-11	10-10	10-9	10-8	10-7	10-6	10-5	10-4
1924	10-3	10-2	10-1	10-0	9-11	9-10	9-9	9-8	9-7	9-6	9-5	9-4

With the height of the pupil taken to the nearest inch, the weight taken to the nearest pound, and the age found to the nearest month by means of an age chart constructed for the month, the teacher is now in a position to classify the pupil by means of the classification chart found on page 6.

## CHAPTER II

### HOW TO GIVE THE TESTS

#### GENERAL INSTRUCTIONS

1. In addition to outdoor and indoor play areas, the facilities and equipment needed to conduct all the tests are as follows: Tape measure 50 or 100 feet long; a one-yard ruler; a calibrated stick 1" x 1" x 8'; a stop-watch reading to tenths of a second; a cord 15 feet long; wool yarn; chalk; cloth or sponge for cleaning surface; painted target; four Indian clubs or short posts of wood; two high jump standards; a high jump pit; cross bars 1" x 1" x 14'; two standards 10 or more feet high; a broad jump pit; a soccer goal 24' wide by 8' high; an adjustable horizontal bar; two small potatoes or blocks of wood; three markers which can be numbered; one basketball backstop and goal 10 feet from ground; four baseball bases; two inseam basketballs; three 12-inch outseam playground baseballs; three soccer balls; and a special ball constructed for the ball put event.
2. Have all facilities required for a test ready in advance of the testing period.
3. So far as possible, all tests should be conducted out-of-doors, but when tests can be conducted better indoors this should be done.
4. As a general rule, running and jumping tests should be conducted on dirt surfaces.
5. Avoid loose ground as the testing surface. Loose sand on a hard surface impedes running, jumping, starting, and stopping, and is a common cause of accidents.
6. When tested, pupils in grades seven, eight, and nine should wear gymnasium suits and shoes. Pupils in grades five and six seldom have such equipment and should, therefore, take the tests in their street shoes and usual clothing, but with coats and sweaters removed. Spiked shoes shall not be used.
7. In most cases the teacher must use pupil assistants in order to carry out the testing with a minimum loss of time. Pupils frequently make mistakes. The teacher must assume the most important duties and should check constantly on all services rendered by student assistants.
8. The teacher should handle the stop-watch for time records, should read the tape measure for distance records, and, as a general

rule, should do all the recording. When a responsible student is assigned to recording, the student should stand near the teacher so his work can be checked.

9. The tester in charge should enforce all rules and regulations strictly, otherwise inaccuracies will result and some pupils will find ways of "beating the game."
10. All pupils should have an opportunity to practice the event a few times before taking the test. Instruction in how the test will be given can best be imparted to pupils in groups.
11. The teacher should not retain large groups of pupils and request them to stand around while others are being tested. Only those pupils who will be tested during the period should be held. Others should be engaged in an assigned program of activity.
12. In all events, and especially in throws for accuracy and distance, pupils should have an opportunity to warm up just before taking the test. Special ways of doing this should be planned by the teacher.
13. When a contestant in his trial fails to comply with any rule or procedure regulating the event, he should be required to repeat the trial. Each pupil must have three trials correctly performed in each event unless stated otherwise.
14. The problem of fatigue during testing must be carefully considered. In events such as the basketball throw for distance and the jump and reach, the pupil can complete three or more trials consecutively without fatigue influencing his score to any noticeable degree. In other events, such as the running broad jump and run and catch, the pupil should have five, ten, or fifteen minutes rest between trials. Pupils should not be tested during or immediately after illness, meals, or a period of vigorous activity. The teacher must use every effort to prevent fatigue from influencing the pupil's performance.
15. All balls, when returned to the performer should be thrown or rolled carefully. Pupils standing about waiting to be tested are not continually on the alert, and may easily be injured by carelessly thrown balls.
16. In running tests, where yarn is held by pupils at the finish line, one pupil should let go at the instant the yarn is breastested by the runner so the yarn will not be broken. Testing a large number of pupils makes this procedure necessary. The yarn should be held breast high. In all running tests pupils should be told by the tester not to slow down as the finish line is approached, but to cross it at full speed, slowing down gradually after it has been crossed.

17. The shortest distance from a point to an arc is always on a line from the point to the center of the circle of which the arc is a part. This information is essential when measuring distance in playground baseball throw for distance, and other similar events.
18. Use a carefully calibrated stick 1" x 1" x 8' for measuring distances in the short jumps. It will save time.
19. A careful check must be made to see that the record made is credited to the pupil who performed.
20. All time records should be recorded in *tenths* of a second and not *fifths* of a second. Watches which give time to the nearest tenth of a second can be purchased. Less discrimination between performances will naturally result where watches giving time to the nearest fifth of a second are used.
21. To avoid confusion, in recording mixed numbers the dash may be used rather than the decimal. To illustrate: Sixteen feet and two inches should be written 16-2; six and three tenths seconds should be written 6-3; five feet four and one-half inches should be written 5-4½. Write all numbers so they can be easily read.
22. Do not test pupils who should be excused because of some serious disability.
23. A record of the pupil's achievement over a period of time is highly desirable because it indicates to the teacher and pupil the rate of acquisition of skills. A 4" x 6" record card is convenient for recording performances at the time of testing and is also suitable for filing as a permanent record card. Ordinarily, transferring records from one form or sheet to another is an extremely laborious and time-consuming arrangement. The use of one form will lighten the teacher's clerical duties. The following individual record card is shown and may be used in a three-year junior high school. It provides for five events, and contains all the necessary data for six testings in each event. Should five or ten additional events be given, the reverse side of the card may be used. Each school may design its own permanent or temporary record card to meet existing conditions. Some teachers will prefer to use a temporary individual record card or a class record sheet. Illustrations of these appear on pages 14 and 15.
24. To avoid confusion and increase accuracy, use differently colored record cards for boys and girls.
25. At the top of each record card write the full name of the pupil, school, and city. This will assist in avoiding errors when recording pupil performances.
26. Fewer errors will be made if the pupil's date of birth is written in the form, Mar. 6, 1921, rather than 3/6/21.

## Class Record Sheet

#### HOW TO GIVE THE TESTS

15

Class Record Sheet									
Name of School		Burbank Junior High		City		Berkeley			
Name of Event		Soccer Dribble							
Month in Which Test is Given		April		Year		1934			
, of Event		21							
Name of Pupil									
Grade	Date of Birth	Height	Age	Weight	Class	Trials	Best	Record	Score
John Williams	7B Mar. 6, 1921	58	13-1	103	24 D	1 2 3	20-3	22-2	20-3 65
Donald Neilson	7B May 8, 1921	57	12-11	99	20 D	26-7	26-6	24-7	24-7 49
Glenn Ralph	7B Dec. 12, 1920	56	13-4	90	19 C	25-5	26-4	28-9	25-5 46
Cleon Christensen	7B Jan. 19, 1921	59	13-3	105	24 D	24-7	24-5	24-1	24-1 51

27. The grade may be written L-7, H-7; or 7A, 7B; or Semester I, Semester II, depending upon the terminology used by the school.
28. Height should be recorded to the nearest inch. Fifty-eight and one-fourth inches should be recorded as 58; fifty-eight and three-fourths should be recorded as 59; fifty-eight and one-half should be recorded as 58. Height should be taken in stocking feet, i.e. without street or gymnasium shoes. Use a stadiometer wherever possible. If no stadiometer is available, place the end of a book vertically against the wall and then lower it until it rests on the head of the pupil. A scale in inches should be fastened to the wall so the height can be read directly.
29. The age in years and months should be computed by using the pupil's date of birth and the age chart constructed for the month in which the test is given.
30. Weight should be recorded to the nearest pound. In the elementary school, take weight with clothes and subtract three pounds for boys and two pounds for girls (weight should be taken with street shoes, heavy coats, and heavy sweaters removed). In the junior high school, take weight without clothes, or take weight in gymnasium suits and subtract one pound for boys or girls.
31. Height, age, and weight records must be taken during the month in which the activity tests are given. The achievement scales cannot be applied with accuracy if this rule is not observed.
32. In assigning numbers to events to be used in a pentathlon or decathlon test, always assign the same number by which the test is known in this book. This will avoid considerable confusion.
33. Follow closely the description and testing procedure indicated for each test.

## DESCRIPTIONS AND TESTING PROCEDURES IN EVENTS

### EVENT No. 1—BALL PUT

#### Description

This event has become popular in a number of western states through its use in the Junior Pentathlon. The ball was designed by the executive committee of the Junior Pentathlon organization for use in the 1933 competition, and resembles a large indoor baseball except for its weight. The ball contains an interior sack filled with "B-B" lead shot to the weight of four pounds, wrapped with kapoc (or similar substance) and string, to size. The outer covering should be of horse-hide leather or heavy canvas, tightly laced. The circumference of the ball is 17 inches and its total weight 5 pounds. The ball is manufactured by sporting goods houses but where it is not possible to obtain the regulation ball, it is suggested that a cover of proper dimensions be filled to weight with material at hand.

It is put from a seven-foot circle by means of an arm-push from the shoulder. In making the put, the contestant is allowed to skip or hop across the ring, but must stay within the circle until the ball lands. He is also allowed to turn or reverse at the final push or thrust of the arm.

It has been found advisable to observe the following rules:

1. The ball must be put from the shoulder with one hand only, and must never be brought behind the shoulder.
2. A fair put shall be one in which no part of the person of the contestant touches the top of the circle, or ground outside the circle.
3. The measurement of each put shall be taken at the circle from the nearest mark made by the ball to the inside of the circumference of the circle on a line from such mark to the center of the circle.
4. Foul puts and letting go the ball in making an attempt shall be counted as trial puts without result. It shall also be foul if the contestant steps on the circle, or leaves the circle before his put has been marked.
5. The use of a harness for the hand composed of a leather strap around the wrist and small fingers from the wrist across the palm of the hand around each finger shall not be permitted.
6. No device of any kind which can be used as a support in aiding to put the ball shall be allowed.

### Testing Procedure

- a. With slaked lime, mark out a seven-foot circle.
- b. Assign a student to judge at the circle and another to set a marker for the pupil's best put. Several sharp-pointed sticks serve admirably for this purpose, one for each contestant.
- c. Allow at least three puts to each contestant for warming up purposes.
- d. Each contestant shall be allowed three trial puts.
- e. The best of these shall be measured to the nearest inch, and shall constitute the individual's record.
- f. Measurements shall be taken from the point where the ball touches the ground (nearest the putting circle) to the inside edge of the seven-foot circle with the tape held at the center of the circle. The tape should be read at the circle rather than at the point where the ball touched the ground.

### EVENT No. 2—BASE RUNNING

#### Description

Use a playground baseball diamond with 45 feet between bases. The diamond may be constructed as follows: Drive a peg at the point wanted for home base; 63 feet  $7\frac{1}{2}$  inches away drive another peg, thus locating second base; hold one end of a tape measure 45 feet long on

second base and with the other end describe one short arc near first base and another near third base; describe short arcs at first and third bases with one end of 45-foot tape measure held at home base. The point of intersection of the arcs at first and third will locate these bases. Place bases one foot square at each of the four points located so that the bases lie within the baseball diamond.

The pupil stands facing first base, and with the rear foot on home base. On signal, pupil runs around the bases, touching first, second, third, and home base in the order named. Failure to touch any of the bases invalidates the record.

#### **Testing Procedure**

- a. Station a pupil at first, one at second, and one at third base to see that runner touches each base. Have the pupils stand outside the diamond at least five feet from the base so they will not interfere with the runner.
- b. The teacher stands at home base with stop-watch in hand.
- c. One pupil runs at a time.
- d. The pupil starts his run from a standing position, and with his rear foot touching home base.
- e. The starting signal should be: "Get ready," "Go."
- f. The watch is started on the word "Go" and stopped at the instant the runner touches home base at the end of his run.
- g. Time shall be taken to the nearest tenth of a second.
- h. The time used to complete the run is the individual's record.

### **EVENT No. 3—BASKETBALL THROW FOR DISTANCE**

#### **Description**

The contestant stands within a circle 6 feet in diameter. When throwing, he must not touch or step over the circle line with any part of the body until the ball has struck the ground. The natural side arm or overhand throw shall be used. Use an official inseam basketball fully inflated.

#### **Testing Procedure**

- a. Make a circle 6 feet in diameter.
- b. Run a straight line from the center of the circle to a point 100 feet distant. This line serves as a guide to the thrower.
- c. Have two basketballs available so one can be returned while another is being thrown.
- d. Assign a pupil to the circle.
- e. Assign three pupils to place markers at the three points where the ball lands. Assign two pupils to handle tape measure, a third,

to see that thrower does not step on or over the circle when throwing, and two other pupils to return balls.

- f. Each thrower should complete three trials before another pupil is assigned to the circle.
- g. Have assistants place markers (numbered one, two, and three) at the points where the ball, after being thrown, first touches the ground.
- h. In a straight line with the center of the circle, measure the distance from each of the three markers to the inside edge of the circle.
- i. Record the distance to the nearest one-half foot. (67 feet 4 inches would be recorded  $67\frac{1}{2}$ ; 67 feet 2 inches would be recorded 67-0.)
- j. Record all three trials; the best of the three trials is the pupil's record.

#### **EVENT No. 4—BASKETBALL THROW FOR GOAL**

##### **Description**

An official, inseam, fully-inflated basketball is used. The basket shall be regulation size and 10 feet from the floor. Extend a line from the center of the backboard to the floor. From this point on the floor, and with a radius of 15 feet, draw a semicircle. The first throw is taken from a point directly in front of the backboard, but outside the semicircle. Each of the remaining throws is taken from the point at which the ball is recovered after the preceding throw. Contestant should try to recover the ball before it hits the floor or ground. If the ball rolls out of the court or beyond the semicircle, the next throw is taken from any point on the semicircle. After retrieving a ball, the contestant may take one step while making the next throw. Any style of throwing may be used.

##### **Testing Procedure**

- a. Assign a pupil to a position near, but back of, the semicircle. He should be directly in front of the backboard.
- b. The starting signal should be: "Get ready," "Go."
- c. At the word "Go" start the stop-watch.
- d. At the end of two minutes say "Stop."
- e. The number of baskets made in the two minutes is the pupil's record.

#### **EVENT No. 5—BASKETBALL THROW FOR GOAL (Special Event)**

##### **Description**

An official, inseam, fully-inflated basketball is used. The basket shall be regulation size and 10 feet from the floor or ground. Extend a line from the center of the backboard to the floor or ground. From

this point on the floor or ground and with radii of 8 and 10 feet draw semicircles. The initial throw for goal shall be made from the free throw line, that is, 15 feet from the backboard. Each of the remaining throws shall be made from a point back of the 8-foot semicircle or 10-foot semicircle according to the class of the contestant. Classes A, B, C, and D use the 8-foot semicircle while Classes E, F, G, and H use the 10-foot semicircle. All attempts after the initial try for goal shall be made with both feet back of the semicircle. This event requires that each contestant score as many baskets as possible within a two-minute period starting when the free throw leaves the boy's hands. When progress (foot movement) is required, the ball must be dribbled at least once, until the thrower steps outside of his throwing line.

Should the ball roll or bounce beyond the throwing circle, a contestant may either toss for goal from the point where he picks up the ball or proceed to the throwing circle by the usual dribble. No progress will be allowed while the ball is in the possession of the contestant except by the usual dribble. Progress without the dribble will constitute a foul and the goal, if made on that throw, shall not count. At the close of the two-minute period, a goal shall be scored only if the ball has left the contestant's hands before the word "Stop" is given.

Retrials will be allowed only when the ball strikes a person other than the contestant, or bounces into an inaccessible place such as a balcony, or comes to rest in the supports of the basket.

#### Testing Procedure

- a. Assign a pupil to a position back of the free throw line.
- b. The starting signal should be: "Get ready," "Go."
- c. After the word "Go" start the stop-watch when the ball leaves the contestant's hands.
- d. At the end of two minutes say "Stop."
- e. The number of baskets (free of fouls) in two minutes is the pupil's record.

#### EVENT No. 6—HOBBLE RACE

##### Description

The pupil stands on one foot, raises the other foot backward, grasps the instep of the raised foot with both hands and holds it against his buttock. Retaining his grasp on the up-raised foot he hops toward the finish line. Releasing either hand from the up-raised foot or falling over disqualifies the runner. The distance hopped is 25 yards.

**Testing Procedure**

- a. With slackened lime, mark starting and finish lines 75 feet apart.
- b. Assign a student as official starter.
- c. The teacher is stationed at finish line with stop-watch in hand.
- d. Assign two students to hold wool yarn taut and breast high over the finish line. One student should release the yarn when breasted to prevent its breaking.
- e. One pupil hops at a time.
- f. As soon as the pupil is in position back of the starting line with his grasp on up-raised foot, the starter should say: "Get ready," "Go." At the word "Go" the pupil begins hopping, the starter's up-raised arm is lowered quickly, and the timer starts the stop-watch. The timer stops the watch when runner breasts the yarn held over finish line.
- g. Time shall be taken to the nearest tenth of a second.
- h. The time needed to complete the race is the individual's record.

**EVENT No. 7—JUMP AND REACH****Description**

The pupil stands facing the wall, feet together, toes touching wall, and toes and heels touching the floor. With both hands held together he reaches as high as possible (heels kept on floor) and makes a mark with a piece of chalk. Contestant then stands with side to wall. While swinging both arms vigorously a jump is made. At the highest point of the jump a second mark is made on the wall with the chalk held in one hand. The distance between the two marks is the individual's record.

**Testing Procedure**

- a. Select a suitable inside wall to be used for test.
- b. Have on hand several pieces of chalk, each piece being approximately one inch in length.
- c. Test one pupil at a time.
- d. Record the distance between the marks to the nearest one-half of an inch.
- e. Use a damp cloth to remove chalk marks after each pupil has been tested.
- f. Give each pupil three trials in succession and record each trial.
- g. The best of the three trials is the pupil's record.

**EVENT No. 8—PLAYGROUND BASEBALL THROW FOR ACCURACY**

**Description**

On the wall of a handball court, or on an outside wall of the school building, make five concentric circles one foot, two feet, three feet, four feet, and five feet in diameter. The center of all circles is three and one-half feet from the ground. The circle lines should not be over one inch in width. In determining the diameter of each circle, include the width of the line. The circumference of the outside circle is one foot from the ground. To conserve playground baseballs, a padded target may be arranged. A throwing line three feet long is established 35 feet from the front of the target. The pupil stands on or back of the throwing line and throws the ball at the target. One foot must be in contact with or back of the throwing line at the time the ball is released. The free overhand throw, as used in hard baseball, shall be used. Each contestant has ten throws. Counting from the center outward, the circles score 10-8-6-4-2. Write each number, except 10, on the target four times and in the appropriate place, so scoring will be easy. Throws going outside of the largest circle score nothing. Throws hitting on the line between two zones score for the inside zone. The total number of points made by the pupil in ten throws is his record.

**Testing Procedure**

- a. Arrange the target according to specifications.
- b. Mark a throwing line 35 feet from the target.
- c. To conserve time use three 12" outseam playground baseballs.
- d. Assign a student to see that contestant has one foot in contact with or back of the throwing line when ball is released.
- e. Assign two students to return balls.
- f. Test one pupil at a time.
- g. The teacher should stand about 15 feet from the target and to the side.
- h. The teacher writes down the score made on each throw, adds the ten scores, and records the total as the pupil's record.
- i. Repeat the test and record both trials for each pupil.
- j. The best of the two trials is the pupil's record.

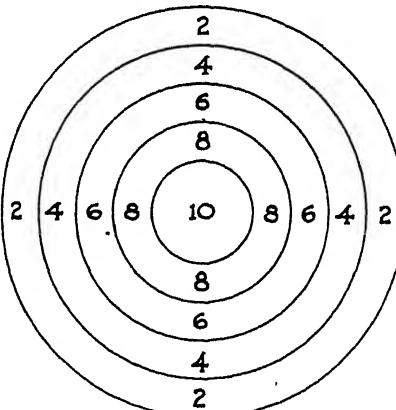

Diagram of Target for Playground Baseball Throw for Accuracy

**EVENT No. 9—PLAYGROUND BASEBALL THROW FOR DISTANCE****Description**

The contestant stands within a circle 6 feet in diameter, and throws a 12-inch outseam, playground baseball as far as possible. When throwing, he must not touch or step over the circle line with any part of the body until the ball has struck the ground. The free overhand or side arm throw as used in hard baseball shall be used.

**Testing Procedure**

- a. Make a circle 6 feet in diameter.
- b. Draw a straight line from the circumference of the circle to a point 200 feet distant. Parallel to this line, and 15 feet away draw on each side of it another line 200 feet long. This 30' x 200' space is called the landing area. All balls thrown must land within this space if the distances are to be measured. Using as a center the point where the first line intersects the circumference of the circle, draw four arcs to intersect the three lines. These arcs are to have radii of 50 feet, 100 feet, 150 feet, and 200 feet.
- c. Have three 12-inch outseam playground baseballs available for throwing.
- d. Assign one pupil to see that the thrower does not touch or step over the circle line.
- e. Assign three pupils to place markers at points where ball lands. Assign two pupils to handle tape measure and two others to return balls.
- f. Each thrower should complete three trials before another pupil is assigned to the circle.
- g. Have assistants place markers (numbered one, two, and three) at the points where the ball, after being thrown, first touches the ground.
- h. For each throw, measure the shortest distance from the marker to the nearest arc and compute the distance from the marker to the point on the circumference of the throwing circle.
- i. A ball thrown outside of the landing area does not count, and another trial is permitted.
- j. Record the distance to the nearest one-half foot. This means to the nearest 6 inches. (Example records—106; 106½; 107; 107½; etc.)
- k. Record the distance for each trial.
- l. The best of the three trials is the pupil's record.

**EVENT No. 10—POTATO RACE****Description**

Two small potatoes or blocks of wood are placed 34 feet and 42 feet, respectively, from a starting point. Blocks or potatoes are placed in circular areas one foot in diameter marked on the ground. Circular areas may be constructed of heavy cardboard and pinned to the ground. Contestant starts from behind the starting line, brings the blocks in successively, places them in a circular area one foot in diameter with the circumference tangent to, but back of, the starting line, returns the blocks to their original positions and recrosses the starting line. This process requires two round trips from the starting line to each of the two circular areas. Pupil runs from starting line to nearest circle; picks up block; returns to starting line; places block in circle; runs to farther circle; picks up block; returns to starting line; places block in circle; picks up other block; runs to nearest circle; places block in circle; returns to starting line; picks up remaining block; runs to farther circle; places block in circle; runs back and crosses starting line. Failure to place blocks in the circular areas invalidates the record. In all cases, blocks placed in the circles must not touch the circumference. The time taken to complete the event is scored.

**Testing Procedure**

- a. Using slaked lime, make a starting line and three circles one foot in diameter. The one circle is tangent to and back of the starting line; the center of one is 34 feet from the starting line; and the center of the other circle is 42 feet from the starting line. All three centers of the circles are on a straight line perpendicular to the starting line.
- b. Place the blocks or potatoes in the circles.
- c. Assign three pupils to watch for placement accuracy at the circles.
- d. The teacher stands at starting line with stop watch in hand.
- e. One pupil runs at a time.
- f. Pupil stands with both feet back of starting line.
- g. Starting signal should be: "Get ready," "Go."
- h. Time shall be taken to the nearest tenth of a second.
- i. The time elapsing from the word "Go" to the instant the runner crosses the starting line at the end of the race is the pupil's record.

**EVENT No. 11—PULL-UP****Description**

The pupil grasps a horizontal bar with an overhand grasp, i.e. back of hands toward face, thumbs under bar, and hands shoulder

width apart. The feet must clear the ground when body is fully extended. Each contestant hangs from the bar with arms and legs straight, feet together. He must pull himself up so his chin is even with or over the bar, and must lower himself after each pull-up until his arms are thoroughly straight. Only a pull-up without snap, swing, or kick, shall score.

#### Testing Procedure

- a. Adjust the horizontal bar so all pupils taking the test can hang free without touching the floor.
- b. Test one pupil at a time.
- c. Be sure arms are fully extended when beginning the test and after each successful pull-up.
- d. A pull-up is not complete unless the chin is even with or just above the bar.
- e. The teacher should observe the pupil while he is doing the test and should record the number of pull-ups made.
- f. Score to the nearest one-fourth pull-up. One-fourth, two-fourths, and three-fourths of a pull-up can be estimated by observing the angle of arms or the proportion of the distance the body is raised.

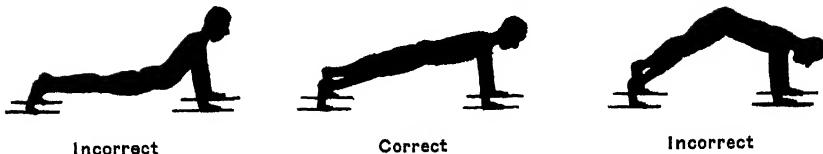

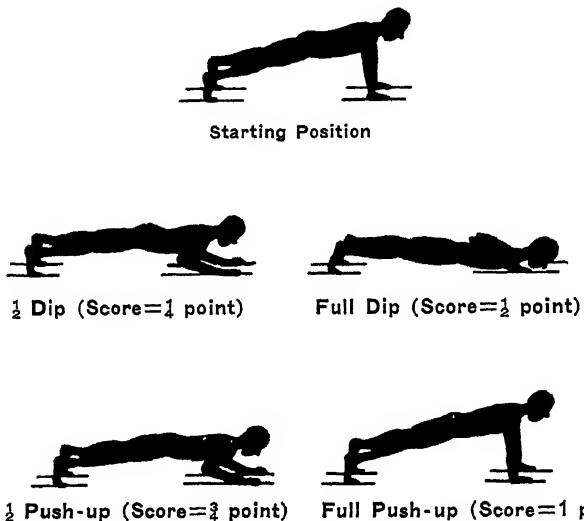

### EVENT No. 12—PUSH-UP

#### Description

Stand at attention, then squat, bending the knees and turning them out at an angle of ninety degrees; place the hands on the floor, shoulder width apart, fingers forward. Jump the feet to the rear so the weight rests on the hands and the toes; arms straight; feet together; neck, back and knees in a straight line. Avoid the "swayback" position or the hips too high. Bend the arms until the chest (not the chin, abdomen or knees) nearly touches the floor. This is the dip. Now straighten the arms. This is the push-up. Repeat as many times as possible.

#### Testing Procedure

- a. Select a clean, dry, level place where the test can be given.
- b. The teacher should observe the pupil for form while doing the test.  
Insist on correct form.
- c. Test one pupil at a time.
- d. Score to the nearest  $\frac{1}{4}$  push-up. Score one-fourth for one-half dip; score one-half for a full dip; score three-fourths for a full dip; plus one-half push-up; and score one for a full dip plus a full push-up.

**CORRECT AND INCORRECT POSITIONS****ILLUSTRATIONS OF PUSH-UP POSITIONS FOR SCORING****EVENT No. 13—RUN AND CATCH****Description**

At a distance of 30 feet from a starting line, and parallel to it, stretch a cord tightly 10 feet from the ground. The cord should be at least 10 feet long. At signal, the pupil runs from the starting line to a point just past the cord, tosses (toward the starting line) a regulation soccer ball (fully inflated) over the cord, catches it, and runs back to touch the starting line. Three such trips are made, finishing at the starting line. In case of failure to catch the ball, it must be secured, tossed over the cord (either direction), and caught before running is continued. The starting line and the cord should both be well away from any obstruction. The total distance run is approximately 60 yards.

**Testing Procedure**

- a. Stretch the cord 10 feet above the ground.
- b. Thirty feet away mark a starting line with slackened lime.
- c. Assign a pupil to watch at the cord to make sure ball is thrown over the cord.
- d. Assign a pupil to record time made.
- e. Teacher stands at starting line with stop-watch in hand.
- f. One pupil runs at a time.
- g. Pupil stands erect and back of the starting line with soccer ball in his arm.
- h. Starting signal given by teacher should be: "Get ready," "Go."
- i. On the first and second returns the starting line must be touched with the ball. On the last return the pupil runs across the starting line.
- j. The time elapsing from the word "Go" until the pupil crosses the starting line on the third return is the pupil's record.
- k. Time shall be taken to the nearest tenth of a second.
- l. Repeat the entire test and record both trials for each pupil. The best trial is the pupil's record.

**EVENT No. 14—RUN—40 YARDS**

**EVENT No. 15—RUN—50 YARDS**

**EVENT No. 16—RUN—60 YARDS**

**EVENT No. 17—RUN—75 YARDS**

**Description**

The pupil stands behind the starting line. In the crouch start, the left or right toe is placed about 6 inches back of the line; the knee is bent; the back knee rests on the ground beside the instep of the forward foot; the hands are on or just behind the starting line; arms straight, shoulder width apart; and the muscles are relaxed. When the starter says: "On your mark!" pupil takes the position described above. When he says, "Get set!" the rear leg is partly straightened, the knee is raised from the ground, the weight is put well forward on the hands, and the muscles are tense. On the word "Go!" push off with the hands and rear foot. Do not straighten the body too quickly. Remain crouching for the first few steps, and do not assume an upright position until after the fifth or sixth stride. Take short strides at first, and lengthen them gradually. Run in a straight line down the course. Do not slow down as the finish line is approached, but cross it at full speed, slowing down gradually after it has been crossed. Never look backward while running.

**Testing Procedure**

- a. Establish a starting line and a finish line exactly 40, 50, 60, or 75 yards apart and parallel.
- b. Assign a pupil as official starter.
- c. Assign two pupils to hold the wool yarn breast high over the finish line.
- d. Assign a pupil as recorder.
- e. Assign a pupil to his position back of the starting line. One pupil runs at a time.
- f. Teacher stands at finish line with stop-watch in hand.
- g. The timer (teacher) raises his arm as a signal to the starter that he is ready; the starter raises his arm and says, "On your mark," "Get set," "Go." With the word "Go" starter brings his arm down quickly, the pupil starts his run, and the timer starts the watch. When the pupil breasts the yarn over the finish line the timer stops the watch.
- h. The time is given aloud to the recorder.
- i. Time shall be taken to the nearest tenth of a second.

**EVENT No. 18—RUNNING BROAD HOP****Description**

The pupil runs to the take-off line, hops from either the right or left foot and lands on the same foot. He must keep his raised foot off the ground and avoid touching the ground with his hands or body until after he has gained control of his balance on one leg. If he fails to perform the event properly, the record does not count and he must try again.

**Testing Procedure**

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Assign one pupil to locate the pupil's toe mark when he begins his hop.
- d. Have one pupil hop at a time.
- e. The distance hopped is measured from the nearest part of the heel mark made at the completion of the hop to the toe mark made at the beginning of the hop.
- f. Measure the distance to the nearest inch and record in feet and inches.
- g. Each pupil has three trials.
- h. The best trial is the pupil's record.

**EVENT No. 19—RUNNING BROAD JUMP****Description**

Facilities for the broad jump should consist of a landing pit 6 feet wide, 18 feet long, and 12 inches to 18 inches deep, filled with coarse damp sand, edges of pit beveled; a take-off line placed 5 feet from the nearest edge of the pit; and a smooth level runway 6' x 40'. Pupil runs toward pit, tries to take off at the take-off line, lands in the pit, and falls to the side or forward. There is no limit to the distance that may be run before making the jump. Extremely long runs are fatiguing. The distance jumped is measured from the imprint of the toe at the take-off line to the nearest point at which any part of the body touched the sand.

**Testing Procedure**

- a. Prepare carefully the broad jump pit and runway.
- b. Mark take-off line with slackened lime.
- c. Assign a pupil to watch at take-off line for toe imprint of jumper.
- d. Assign two pupils to assist with the measuring tape.
- e. Assign one pupil to keep sand in pit level.
- f. Have contestants form a line at the far end of runway.
- g. Have each pupil jump three times, returning to his place in the line after each jump.
- h. Measure the distance jumped to the nearest inch and record in feet and inches.
- i. The best of the three trials is the pupil's record.

**EVENT No. 20—RUNNING HIGH JUMP****Description**

Facilities for the running high jump should be: A pit 8' wide, 14' long, and 12" to 18" deep, filled with sawmill shavings; upright posts 10' apart for holding crossbar; a crossbar 1" x 1" x 14' resting on pins which project not more than two inches from uprights; and a large smooth, level runway. Any style of jumping, except the dive,<sup>1</sup> may be used. Three trials are allowed each boy at each height of crossbar. When the crossbar is removed by a jumper it constitutes a trial jump without result. Holes  $\frac{3}{8}$ " in diameter may be drilled in the standards at one-inch intervals so the crossbar can be raised one inch at a time.

**Testing Procedure**

- a. Carefully prepare all facilities.
- b. Keep shavings loose.

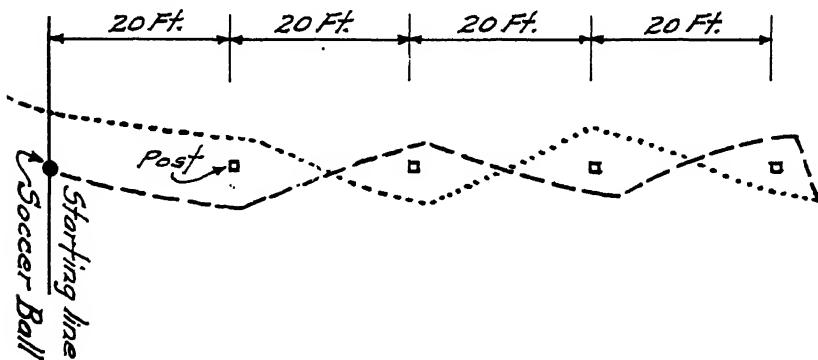

<sup>1</sup> A fair jump is one in which the head of the contestant does not go over the bar before the feet and is not below the buttocks in clearing the bar. Neither diving nor somersaulting over the bar shall be permitted.

- c. Place crossbar at 3 feet and divide class into two groups, namely: those who clear 3 feet and those who do not.
- d. Place crossbar at 2 feet and begin testing the lower group.
- e. Raise the crossbar one inch at a time.
- f. Each pupil, if necessary, shall have three trials at each height of the crossbar.
- g. The height jumped is measured from the upper edge of the middle of the crossbar to the ground in a direct line.
- h. When a pupil fails in three trials to clear the crossbar, record as his record the height he last cleared.
- i. Measure height jumped to the nearest inch, and record in feet and inches.

### EVENT No. 21—SOCCER DRIBBLE

#### Description

Establish four posts in line and twenty feet apart. As substitutes, boys, jumping standards, or Indian clubs may be used. A soccer ball is placed on a starting line twenty feet from the first post. On the signal "Go" the pupil dribbles the ball with his feet forward past the opposite side of each successive post to the last post, dribbles it around the last post, and dribbles the ball back to the first post in the same way. On passing post No. 1 on the return trip, he kicks the ball across the starting line. Ball must be kicked at a point no farther than 20 feet from the starting line. The contestant must use only his feet throughout the performance.

Method of Performing Soccer Dribble

#### Testing Procedure

- a. Locate the four posts in a line perpendicular to the starting line.
- b. With slackened lime draw a starting line twenty feet from the first post.

- c. Assign one student to see that contestant dribbles the ball around the posts in the correct manner.
- d. The teacher stands at the starting line with stop-watch in hand.
- e. A soccer ball is placed on the starting line and a pupil assigned to his position behind the ball.
- f. The starting signal should be: "Get ready," "Go."
- g. At the word "Go" the pupil begins his dribble and the timer starts the stop-watch.
- h. The time elapsing from the signal "Go" to the instant the kicked ball crosses the starting line is taken as the pupil's record.
- i. Time shall be taken and recorded to the nearest tenth of a second.
- j. Give each pupil three trials. The best trial is the pupil's record.

### **EVENT No. 22—SOCCER KICK FOR DISTANCE**

#### **Description**

A regulation soccer ball, well inflated, is placed on the ground at a point on the circumference of a circle. The pupil within the circle runs and kicks the ball into the air as far as he can. The distance the ball is kicked is the pupil's record.

#### **Testing Procedure**

- a. Mark a circle with a five-foot radius.
- b. Using a point on the circumference of the circle as the center, describe an arc with a 50-foot radius. Locate two points on the arc by a straight line 50 feet long. From the point on the circumference of the circle mark two straight lines, each 150 feet long, so they pass through the two points on the arc. These two lines will enclose a 60 degree angle. A second arc with a radius of 100 feet from the point on the circle should be drawn to intersect the diverging lines.
- c. Place a regulation soccer ball at the point on the circumference of the circle.
- d. If three soccer balls are available, time will be saved.
- e. Assign one pupil to see that the contestant does not step on or over any part of the circumference of the circle until after the kicked ball leaves the ground.
- f. Assign three pupils to place markers at points where the ball lands. Assign two pupils to handle the tape measure and two others to return the balls.
- g. Each contestant should complete three trials before another pupil is assigned to the circle.
- h. Have assistants place markers (numbered one, two, and three) at the points where the ball, after being kicked, first touches the ground.

- i. For each kick measure the shortest distance from the marker to the nearest arc and compute the distance from the marker to the point on the circumference of the kicking circle.
- j. A ball kicked outside of the landing area does not count, and another trial is permitted.
- k. Record the distance to the nearest one-half foot.
- l. The best of the three trials is the pupil's record.

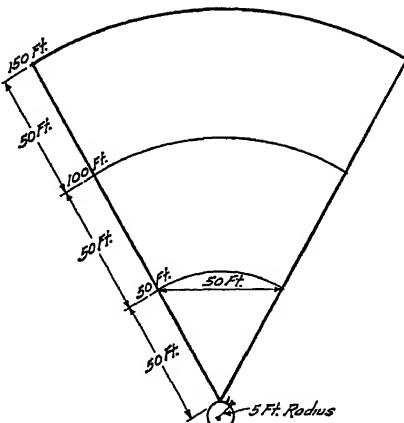

Diagram Showing Circle and Landing Area for Soccer Kick for Distance

### EVENT No. 23—SOCCER PLACE KICK FOR ACCURACY

#### Description

A soccer goal 24 feet wide and 8 feet high to the lower edge of the crossbar is necessary for this event. A regulation soccer ball (well inflated) is placed on a line directly in front of the soccer goal and 30 feet away. The contestant stands behind the ball and with or without a run tries to kick the ball through the goal. Ten kicks shall be allowed. Balls going through the goal on the fly score 8 points; balls going through on the first bounce score 5 points; and balls going through after the second bounce or on the roll score 2 points. Balls which fail to go through the goal score nothing. If the ball is moved from its position by the contestant's foot it shall be considered a trial.

#### Testing Procedure

- a. Parallel to the goal line and 30 feet away from the middle of the goal, mark a 3-foot line.
- b. Place a soccer ball on the line.
- c. Assign a pupil to place the ball on the line just before each kick is made; assign two pupils to return the kicked balls.
- d. Time will be saved if three soccer balls are used.
- e. The teacher should stand at the goal line near one of the goal posts in a position to evaluate the score.
- f. Each pupil should complete his ten trials before another pupil is tested.
- g. The teacher writes down the score made on each kick, adds the ten scores, and records as the pupil's record.

**EVENT No. 24—SOCCER THROW-IN FOR DISTANCE****Description**

The pupil stands with both feet toeing a line three feet long. Holding a regulation soccer ball (well inflated) overhead with both hands, he throws it from that position as far as possible. The feet may be spread or held together, but both feet must remain back of the line until the ball hits the ground. The feet must straddle the mid-point of the line as all measurements are taken from the mid-point.

**Testing Procedure**

- a. Mark a line 3 feet long.
- b. Assign one pupil to see that the contestant remains back of the line and throws the ball properly.
- c. Assign two pupils to assist with the measuring tape, three pupils to place markers, and two pupils to return the balls. Time will be saved if three balls are used.
- d. Each pupil being tested should complete three trials before another pupil begins his test.
- e. Have assistants place markers (numbered one, two, and three) at the points where the ball, after being thrown, first touches the ground.
- f. Measure the distance in a straight line from each marker to the mid-point of the throw-in line.
- g. Measure the distance to the nearest inch and record in feet and inches.
- h. Record the distance for each trial.
- i. The best trial is the pupil's record.

**EVENT No. 25—STANDING BROAD HOP****Description**

The pupil stands on one foot, toes the take-off line, and hops forward landing on the same foot. He must keep his raised foot off the ground until after the hop is completed and must avoid touching his hands and body to the ground. If he fails to perform the event properly the record does not count and he must try again.

**Testing Procedure**

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil hop at a time.
- d. The distance hopped is measured from the nearest part of the heel mark to the take-off line.

- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best of the three trials is the pupil's record.

### EVENT No. 26—STANDING BROAD JUMP

#### Description

The pupil stands on both feet toeing a starting line. He may rock forward and back alternately, but may not lift either foot clear of the ground, or cross the toeing line. The jump is made from both feet to a landing on both feet. After landing, the pupil should fall forward and walk forward.

#### Testing Procedure

- a. Mark a starting line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil jump at a time.
- d. The distance jumped is measured from the nearest point on the ground touched by any part of the body to the starting line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best trial is the pupil's record.

### EVENT No. 27—STANDING BROAD STEP

#### Description

The pupil stands on one foot toeing the take-off line, and leaps forward landing on the other foot. The raised foot may be swung back and forth before making the leap, but the supporting foot must be kept on the ground. There must be no preliminary hop. In making the step, after the supporting foot leaves the ground, it must not touch the ground again until after the pupil has definitely landed on the other foot. If he fails to perform the event properly the record does not count and he must try again.

#### Testing Procedure

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil perform at a time.
- d. Each pupil has three trials.
- e. The distance stepped is measured from the nearest part of the heel mark to the take-off line.

- f. Measure the distance to the nearest half inch and record in feet and inches.
- g. The best trial is the pupil's record.

### **EVENT No. 28—STANDING DOUBLE BROAD JUMP**

#### **Description**

The pupil stands on both feet toeing a starting line. He makes two successive forward jumps, and in each case lands on both feet. The second jump is made without a pause after the first jump.

#### **Testing Procedure**

- a. Mark a starting line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil jump at a time.
- d. The distance jumped is measured from the nearest point on the ground touched by any part of the body after the second jump, to the starting line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best trial is the pupil's record.

### **EVENT No. 29—STANDING HOP, STEP AND JUMP**

#### **Description**

The pupil stands on one foot toeing the take-off line, hops forward on the same foot, steps forward on the other foot, and leaps forward landing on both feet. From start to finish the performance is continuous without a pause.

#### **Testing Procedure**

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil jump at a time.
- d. The distance jumped is measured from the nearest heel mark made on the last jump, to the take-off line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best trial is the pupil's record.

**EVENT No. 30—STANDING LEAP AND JUMP****Description**

The pupil stands on both feet toeing a starting line. He leaps forward landing on one foot and then jumps forward landing on both feet. The jump is made without a pause after the leap.

**Testing Procedure**

- a. Mark a starting line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil jump at a time.
- d. The distance jumped is measured from the nearest point on the ground touched by any part of the body after the last jump, to the nearest point on the starting line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best of three trials is the pupil's record.

**EVENT No. 31—STANDING THREE HOPS****Description**

Pupil stands on one foot toeing a take-off line. He takes three consecutive hops on the same foot without pausing between hops. The other foot must not touch the ground until after the performance is completed.

**Testing Procedure**

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil perform at a time.
- d. The distance hopped is measured from the nearest part of the heel mark made on the last hop to the take-off line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials. Record each trial.
- g. The best trial is the pupil's record.

**EVENT No. 32—STANDING TRIPLE BROAD JUMP****Description**

The pupil stands on both feet held together toeing a take-off line. He makes three successive forward jumps, landing on both feet each

time, and performing without a pause between jumps. The feet may or may not be kept together throughout the performance.

#### Testing Procedure

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil perform at a time.
- d. The distance jumped is measured from the nearest heel mark made on the last jump, to the take-off line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three trials.
- g. The best trial is the pupil's record.

### **EVENT No. 33—STANDING WHOLE HAMMON**

#### Description

The pupil stands on one foot toeing the take-off line. In continuous succession he makes two hops, two steps, and two jumps. If the pupil fails to perform properly he must try again.

#### Testing Procedure

- a. Mark a take-off line 3 feet long.
- b. Assign two pupils to assist with the measuring tape.
- c. Have one pupil jump at a time.
- d. The distance jumped is measured from the nearest part of the heel mark made on the last jump, to the take-off line.
- e. Measure the distance to the nearest inch and record in feet and inches.
- f. Each pupil has three successful trials.
- g. The best trial is the pupil's record.

### **HOW TO USE THE ACHIEVEMENT SCALES**

The achievement scales found in Part II and Part III of this book appear in simple form and can be easily understood by teachers or pupils. To assist in planning and operating a testing program, the following suggestions are offered:

1. Read carefully the descriptions and testing procedures for the various events.
2. Choose the events to be included in the testing program.
3. Select or devise an individual record card or class record sheet so the necessary data for each pupil and for each event may be recorded. (See pages 13, 14, and 15.)

4. Classify each pupil according to the plan explained in Chapter I.
5. Give each pupil each test observing the regulations contained in Chapter II under General Instructions and under Descriptions and Testing Procedures in the Events.
6. After classifying the pupil and obtaining his performance record in a specific event, consult the Contents for the page location of the achievement scale for the event in question.
7. In the achievement scale, locate the pupil's performance record in the column under the pupil's classification. The score to be given for the performance is found directly opposite to the left or right. For example, refer to the case of a Class E girl in Event No. 27, Standing Broad Step (see page 144) who has a performance record of 5 feet  $7\frac{1}{2}$  inches. The performance of 5 feet  $7\frac{1}{2}$  inches is located in the column under Class E, and the score 60 is found directly opposite to the left and right.
8. Wherever the exact performance record of the pupil cannot be found in the achievement scale, find the record nearest to it and use the score directly opposite. For example, take a performance record of 29 feet 7 inches for a boy in Class D in Event No. 24, Soccer Throw-In for Distance (see page 89). For a performance record of 29-8, the boy would get a score of 44, and for 29-4 he would get 43. The actual performance record of 29-7 is nearer to 29-8 than to 29-4 so the pupil is given a score of 44.
9. Should the performance record of the pupil fall exactly mid-way between two records appearing in the achievement scale, use the record giving the lower score. For example, take a performance of 29 feet 6 inches for a boy in Class D in event No. 24, Soccer Throw-In for Distance (see page 89). This performance is exactly mid-way between 29-4 and 29-8. The boy should be given a score of 43, not 44.

PART III  
SUGGESTIONS ON COMPETITION  
AND  
TECHNIQUES USED IN CONSTRUCTION OF  
SCALES

---

## CHAPTER V

### SUGGESTIONS ON COMPETITION

There are a number of uses to which achievement scales in physical education activities may be put so a few suggestions here may be of some value to the teacher.

#### ADAPTING THE PROGRAM TO INDIVIDUAL NEEDS

Teachers are in no position to adapt the physical education program to the needs of individual pupils until they know the physical and health status of each pupil. Examinations given by physicians and nurses will yield valuable information, but the skill status in a variety of physical education activities can be found only through close observation by the teacher and by the results of an achievement testing program.

Pupils are developed when they engage in physical education activities. There must be one or more fundamental underlying causes when pupils fail to develop to the extent which normally would be expected. When a pupil secures an average score of 75 in ten well chosen individual athletic events, as measured by the achievement scales in this book, there is every reason to believe such a pupil has attained his development because the hereditary and environmental factors have been favorable. On the other hand, an average score of 26 in the same ten individual athletic events would indicate the hereditary or environmental factors, or both, had been unfavorable to the pupil's development. While wide differences in athletic achievement are to be expected, low achievement may be the result of failure of the pupil to develop according to his true capacity, rather than the result of low capacity. A detailed analysis of pupils' physical, health, and skill status should be made with the hope of locating handicaps, removing them, if possible, and adapting each pupil's program to meet his needs. Teachers interested in giving all pupils the fullest opportunity for development will at once realize the possibilities of such a program.

#### INDIVIDUAL IMPROVEMENT

Competition offers incentive to improvement. Pupils in general like to do better than they have done before, and better than their fellows do. Someone has said that competition is the spice of the physical education activity program and this, of course, applies equally

well to competition against one's previous record and to competition against the record of one's fellow student.

One of the primary purposes in setting up the original California decathlon tests was to motivate pupils; to stimulate interest in improvement; to impel pupils to strive for higher and higher scores as time went by; and to enable the pupil to compare his achievement in one event with that in another. Through the use of the achievement scales here given, increased proficiency in athletic events is shown by an increase in the scores given to the performance records. Records and scores in one month or one semester may be compared with those previously established. The boy or girl can see in a concrete way how he or she is progressing and progress will mean added interest and increased development. Teachers should encourage pupils to compete with their own previous records. Such competition is more to be desired than either intramural or interschool competition.

### GROUPING IN TERMS OF ACHIEVEMENT

The teacher may use the achievement scales as an aid in grouping pupils according to skill. In large schools this may be of practical advantage. Pupils differing greatly in skill in a particular activity usually become less interested and somewhat discouraged when they must play together. For a boy to kick the soccer ball out of bounds every time he kicks it is discouraging to other soccer players more highly skilled. Numbers permitting, the formation of at least three ability groups (beginners, average, advanced) seems to have merit. Instruction specially adapted for each group may be arranged.

### PENTATHLON TESTS

A pentathlon test consists of five events. In order to encourage the development of all-round ability, pentathlon and decathlon tests should include events which test different elements, i.e., running, throwing, kicking, jumping, pulling, pushing, and catching. Three examples of all-round pentathlon tests for boys and three for girls are shown. Other suitable combinations of events may also be selected.

### DECATHLON TESTS

The decathlon test is a method of scoring achievement in ten individual athletic events so selected that they indicate the degree of all-round development of the pupil. The achievement scores attained in ten events may be added and then averaged to give a single index of all-round achievement in one phase of the physical education program. The total achievement of a group or class may be found by adding the averaged scores of the pupils. Should the average achievement of a group or class be desired, this may also be computed.

## Pentathlon Tests for Boys

Test I		Test II		Test III	
No.	Event	No.	Event	No.	Event
9	Playground Baseball Throw for Distance	3	Basketball Throw for Distance	2	Base Running
11	Pull-Up	10	Potato Race	7	Jump and Reach
14	Run—40 Yards	12	Push Up	13	Run and Catch
22	Soccer Kick for Distance	23	Soccer Place Kick for Accuracy	21	Soccer Dribble
26	Standing Broad Jump	29	Standing Hop, Step and Jump	24	Soccer Throw-In for Distance

## Pentathlon Tests for Girls

Test I		Test II		Test III	
No.	Event	No.	Event	No.	Event
4	Basketball Throw for Goal	4	Basketball Throw for Goal	9	Playground Baseball Throw for Distance
9	Playground Baseball Throw for Distance	6	Hobble Race	13	Run and Catch
15	Run—50 Yards	8	Playground Baseball Throw for Accuracy	21	Soccer Dribble
22	Soccer Kick for Distance	23	Soccer Place Kick for Accuracy	24	Soccer Throw-In for Distance
30	Standing Leap and Jump	25	Standing Broad Hop	31	Standing Three Hops

Development results from practice of decathlon or pentathlon events. The decathlon tests constitute a measure of pupil development. Comparison of the results of successive tests indicates pupil progress. The practice of measuring achievement is a powerful incentive to the pupil to further his own development. Therefore, teachers should emphasize the organization of the children in systematic play, practice, or competition in the events. Tests should be given occasionally, i.e., at the beginning and end of each term or once each term. Further, it should be remembered that while the decathlon events test fundamental elements underlying all physical education activities, they should not be

used ordinarily to the exclusion of other phases of the physical education program. Three sample decathlon tests for boys and three for girls are suggested.

When choosing events for a pentathlon or decathlon test, it is important to choose those which test a variety of the fundamental elements of catching, jumping, kicking, pulling, pushing, running, and throwing. The table on page 158 showing the fundamental elements involved in each event will be found helpful in selecting the events to make up a decathlon or pentathlon.

### Decathlon Tests for Boys

Test I		Test II		Test III	
No.	Event	No.	Event	No.	Event
1	Ball Put	2	Base Running	3	Basketball Throw for Distance
4	Basketball Throw for Goal	5	Basketball Throw for Goal (Special Event)	8	Playground Baseball Throw for Accuracy
6	Hobble Race	9	Playground Baseball Throw for Distance	11	Pull-Up
11	Pull-Up	10	Potato Race	13	Run and Catch
14	Run—40 Yards	12	Push-Up	16	Run—60 Yards
18	Running Broad Hop	15	Run—50 Yards	20	Running High Jump
21	Soccer Dribble	19	Running Broad Jump	22	Soccer Kick for Distance
24	Soccer Throw-In for Distance	23	Soccer Place Kick for Accuracy	27	Standing Broad Step
26	Standing Broad Jump	25	Standing Broad Hop	28	Standing Double Broad Jump
29	Standing Hop, Step and Jump	33	Standing Whole Hammon	31	Standing Three Hops

### INTRAMURAL COMPETITION

In a large number of schools and school systems in the United States, considerable interest has been developed in physical education activities by organizing the various recess periods, time before school, and time after school so that boys and girls compete on teams and have regularly organized schedules. Such an established program may be supplemented to good advantage by including competition in individual athletic events and especially those events closely related to a particular sport season.

## Decathlon Tests for Girls

Test I		Test II		Test III	
No.	Event	No.	Event	No.	Event
4	Basketball Throw for Goal	3	Basketball Throw for Distance	2	Base Running
6	Hobble Race	4	Basketball Throw for Goal	4	Basketball Throw for Goal
7	Jump and Reach	8	Playground Baseball Throw for Accuracy	6	Hobble Race
8	Playground Baseball Throw for Accuracy	16	Potato Race	9	Playground Baseball Throw for Distance
9	Playground Baseball Throw for Distance	13	Run and Catch	16	Run—60 Yards
13	Run and Catch	15	Run—50 Yards	23	Soccer Place Kick for Accuracy
14	Run—40 Yards	21	Soccer Dribble	24	Soccer Throw-In for Distance
21	Soccer Dribble	22	Soccer Kick for Distance	27	Standing Broad Step
25	Standing Broad Hop	27	Standing Broad Step	30	Standing Leap and Jump
27	Standing Broad Step	31	Standing Three Hops	31	Standing Three Hops

During the soccer season, for example, there are four closely related individual athletic events which can be used in the intramural program: Soccer Dribble, Soccer Kick for Distance, Soccer Place Kick for Accuracy, and Soccer Throw-In for Distance. A similar selection of events may be made in connection with playground baseball, basketball, and track and field. The boy or girl engaging in intramural competition is having fun, is learning to act as a member of a group, and is also getting needed practice in the elements of game activities.

Intramural competition using as a basis individual pupils, classes, classrooms, grades, clubs, or color groups, may be organized. It should be pointed out that the school champion in these competitions would be the pupil or group of pupils obtaining the highest total score in a single event, or in a group of events, such as a pentathlon or decathlon. Reilly's suggestion of inter-group meets requiring 80 per cent participation (this figure may have to be lowered) might be used to good advantage in the after school or intramural program.<sup>1</sup> Special record cards or sheets should be devised for use in recording all necessary data needed in the type of intramural program to be organized.

<sup>1</sup>Frederick J. Reilly. *New Rational Athletics for Boys and Girls*. New York: D. C. Heath and Company, 1917. p. 82.

Table Showing Fundamental Elements in Each Event

No.	Event	Catching	Jumping	Kicking	Pulling	Pushing	Running	Throwing
1	Ball Put		x			x		
2	Base Running						x	
3	Basketball Throw for Distance							x
4	Basketball Throw for Goal	x				x	x	x
5	Basketball Throw for Goal (Special Event)	x				x	x	x
6	Hobble Race		x				x	
7	Jump and Reach		x			x		
8	Playground Baseball Throw for Accuracy							x
9	Playground Baseball Throw for Distance							x
10	Potato Race						x	
11	Pull-Up				x			
12	Push-Up					x

## INTERSCHOOL COMPETITION

Interschool competition for elementary schools has been discouraged chiefly because of difficulties in connection with cost, travel, and the limitation of participation to a few members of the school, with the usual neglect of the mass of pupils. Less objection to interschool competition has been voiced where the competing schools are in the same school system, are fairly near to each other, and where the general physical education program for all pupils is not neglected.

Interschool competition in a pentathlon or decathlon can be arranged under several plans, and perhaps meets with more approval because of the number of pupils who can participate. Schools may compete with other schools by correspondence, i.e., each competing school in the same school system, in a different community, or in a different state, may test its own pupils and send the results to the other school. Children may also travel to a nearby playground for an after-school or week-end meet with another school. Such a meet should be well organized in advance, and should be much like a track and field meet conducted under definite rules and regulations related to participation. The following suggestions may be in order:

1. From 60 to 80 per cent of the pupils in the group competing should take part.
2. All-round performance should be stressed, that is, average or total scores should be considered rather than scores of individual pupils in specific events.
3. Because of the time required to test large numbers of pupils, groups should compete according to a rotating schedule. In this way all groups must be in training during the whole testing period, and no particular advantage is gained by a teacher putting special emphasis on any one group.

The older boys and girls in the school should be trained as assistants to help with weighing, measuring, recording performances, and developing squad organization to facilitate the smooth administration of all testing programs. Some such plan as is now in operation in the Junior Pentathlon program, where student executives are appointed in each school, should prove particularly helpful in meets such as are suggested here.

### Motivation

School marks and school emblems have been used extensively as means of pupil motivation. Marks have been given to pupils to satisfy the demands of parents who expect definite reports of progress; to reward and motivate pupils in their school work; and to serve as a basis for recommendations to other institutions.

Many researches carried on in the educational field have shown pupil marks given by teachers to be unreliable. Some of the arguments against their use are: (1) teachers give pupil marks in terms of their own subjective judgments which are frequently unreliable; (2) marks are not always related to desirable educational objectives; (3) pupils often adopt good marks as an objective, rather than achievement in interesting activities; (4) teacher-pupil personality adjustments are in some cases made more difficult; (5) marks may contribute to pupil inferiority and superiority complexes; and (6) they are at best, poor substitutes for a close personal relationship between the teacher and the pupil, and between the school and the home. The advisability of discontinuing marks in physical education as whips to get pupils to engage in activities should be recognized. It should be obvious that teaching methods which recognize the interests and abilities of pupils replace external drives with internal drives.

At present, marks in physical education are given to pupils. They are usually based on the teacher's subjective opinion, and include such items as the child's attendance, effort, attitude, conduct, and achievement in physical skills. Each of these factors is judged on a different basis, and the judgments then combined to form the final mark. For this subjective rating, whether in terms of letters or numbers, should be substituted reports of progress in the accomplishment of legitimate objectives measured in definite units. In the use of the achievement scales, the teacher has a means of measuring objectively the pupil's physical skills, and need no longer rely on subjective opinion. Pupil progress may be measured and made known to pupil, teacher, and parent. Scores in the achievement tests should not be used by the teacher as a part of a subjective mark, but rather to diagnose pupil difficulties in relation to their development.

The presentation of awards for athletic proficiency has become a traditional practice in most school systems. Trophies, school emblems, or certificates of accomplishment are awarded to individuals and to classes or groups. Many leading educators have criticized severely the giving of school awards because they feel that interest in the activity and the joy of accomplishment are reward enough for any pupil's participation in athletic activity. Hence, the general feeling that school awards are unnecessary and need not be given.

## CHAPTER VI

### TECHNIQUES USED IN CONSTRUCTION OF SCALES

During the past few years the validity of various classification schemes using the factors age, grade, height, and weight has been questioned. A number of scientific studies have been made to determine the best weighting of factors when a certain combination of them are used in a classification plan.

The first of these scientific studies was made by McCloy using Chinese students of elementary and high school age as subjects, and using decathlon test records of Detroit boys.<sup>1</sup> In this study the best combination of these factors to use in a classification scheme for handicapping was found to be

$$8A + 1\frac{1}{2}H + W$$

where A is the age in years, H the height in inches, and W the weight in pounds. Later McCloy set up a classification index based on additional data (age ranges 10 to 16) and found the best weighting to be

$$20A + 6H + W$$

Again, A refers to the age in years, H to the height in inches, and W to the weight in pounds.<sup>2</sup>

The Junior Pentathlon classification scheme for boys from ten to sixteen years of age originated in Southern California, and sponsored by the Los Angeles Times, was developed by Cozens<sup>3</sup> as

$$.77A + 2H + .46W$$

where H and W are used as before, but where A is age expressed in months. To illustrate how close the Junior Pentathlon classification formula is to McCloy's classification index, it may be reduced to McCloy's terms, expressing age in years. When this is done the expression reads

$$20A + 4.33H + W$$

<sup>3</sup>*Junior Pentathlon, 1933*, Foreword. Los Angeles: Los Angeles Times. This program includes five events—50-yard dash (for juniors) or 75-yard dash (for seniors), running high jump, running broad jump, two-minute basketball throw for goal, and ball put (5 lbs. in weight).

In a recent study using a great many thousand records of Los Angeles boys and girls<sup>1</sup> the best weightings for the factors age, height and weight were computed from the relationships of these factors to the averaged performances in four fundamental play elements. The best weightings were found to be

$$A + 3.3H + .66W$$

where age is expressed in months, or when transposed into McCloy's terms, and expressing age in years

$$20A + 5.5H + 1.10W$$

### THE VALIDITY OF THE CALIFORNIA CLASSIFICATION CHART<sup>2</sup>

The validity of the California classification chart was studied, using A, H, and W data of 300 Sacramento city school children in the Bret Harte Elementary School. These children were classified by the formula immediately preceding and by the classification chart given in this book. The correlation between these two plans ( $r = .983$ ) proved to be so high that the California plan may be used with the utmost confidence when classifying elementary and junior high school boys and girls for purposes of competition in physical education activities. Also, it has been shown that three separate studies agree very closely on the weightings which should be given to the factors age, height and weight in such a handicapping arrangement.

### DETERMINATION OF AVERAGE EXPONENT VALUES FOR CLASSES A AND H

As will be noted from the classification chart, classes B, C, D, E, and F each have a range of five exponent values. The mid-point of each class range may be taken as the single value best representative of each particular class. Class G has a range of four exponent values from 35 to 38. The mid-point, 36.5, may be taken as the single value best representing that group.

With classes A and H, however, the situation is somewhat more complex. The average exponent values for boys and girls in these classes were found to be as follows:

Class	Boys	Girls
A	7.05	6.60
H	43.19	41.00

<sup>1</sup>Frederick W. Cozens, and N. P. Neilson. "Age, Height and Weight as Factors in the Classification of Elementary School Children," *Journal of Health and Physical Education*, Volume III, No. 10, December, 1932, pp. 21, 58.

<sup>2</sup>For classification chart see page 6.

From these results the following exponent values were taken as representative of the classes:

Class	Boys	Girls
A	7	6.67 <sup>1</sup>
H	43	41

These exponent values were used throughout the study in plotting the means of the various events.

### SOURCES OF DATA

The data constituting the basis for construction of the achievement scales were the performance records of over 79,000 boys and girls enrolled in California elementary schools and junior high schools. The performances of from 1060 to 2400 pupils were available for each event, both for girls and boys and between 130 and 525 performance records were used for developing the scales for each classification in each event. The performance records were taken under conditions identical with those specified in Chapter II for conducting the events. Thus, the scores in the achievement scales are directly related to the actual performances of pupils in the same classification.

### DETERMINATION OF MEANS AND STANDARD DEVIATIONS

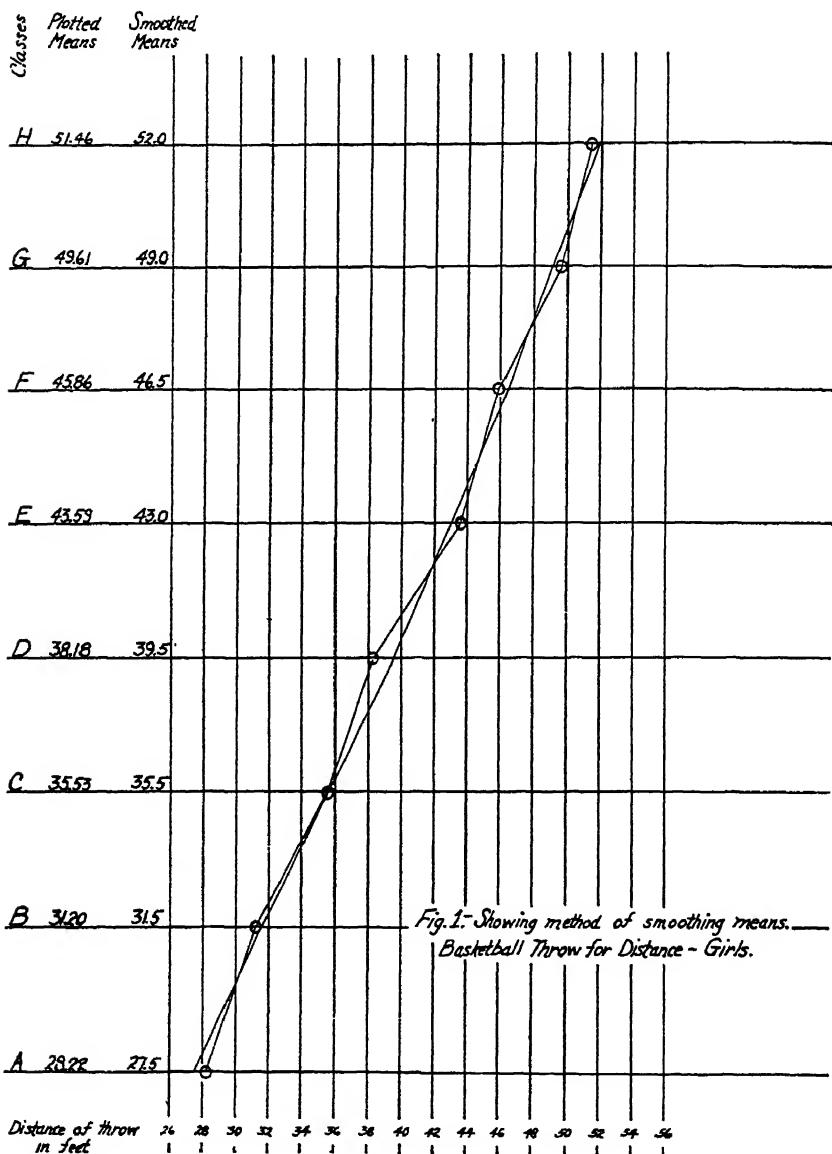

The performance records of all pupils were segregated according to their classifications. The best records of each pupil in each event were tabulated and the means and standard deviations of each distribution computed. These means and standard deviations formed the basis for the construction of the achievement scales.

Performance in the several events increases rather regularly as the factors of age, height, and weight increase. It was, therefore, assumed that the straight line or curve of best fit to the means of performance in each of the several classes in each event would be a truer approximation to the actual manner in which performance increases than would the means computed separately for the several classes. Consequently, the means of performance in each event for each class were plotted on coordinate paper and the lines of best fit drawn to represent true average performance. To illustrate the method used in each event, an example is shown in Figure 1.

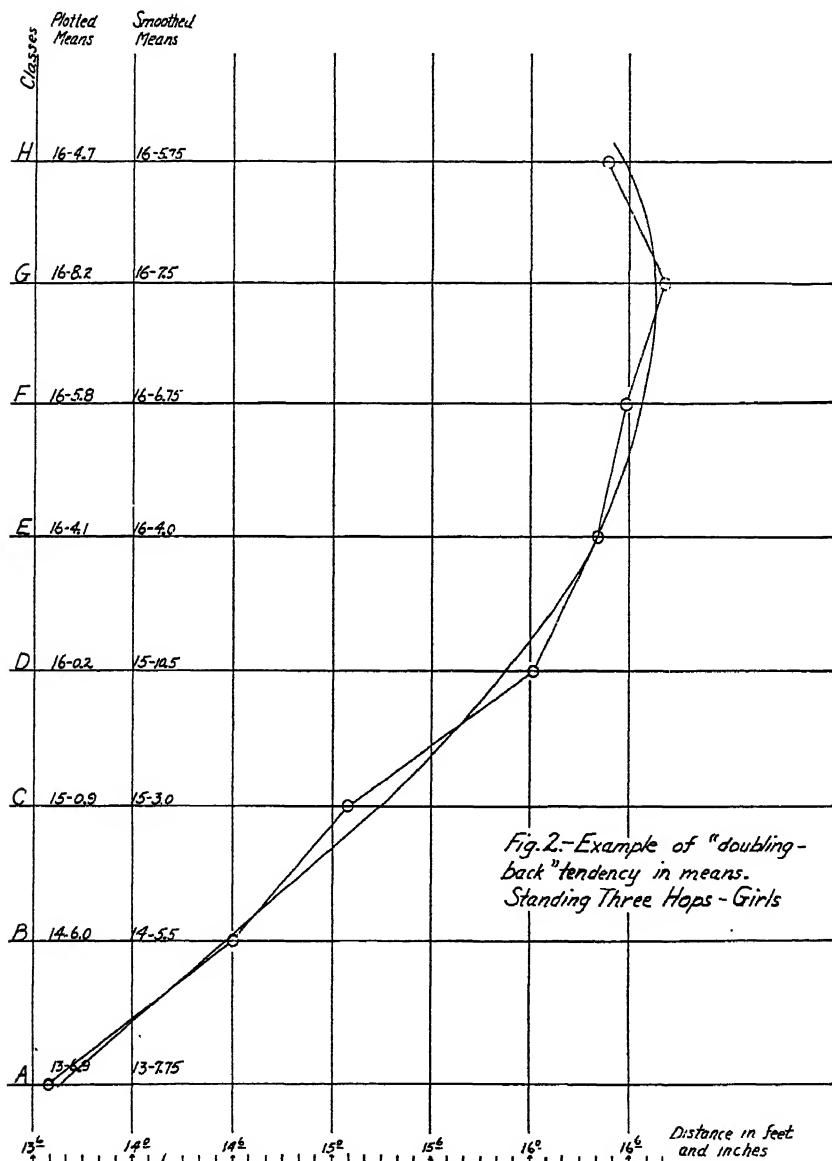

In connection with some of the events for girls, particularly those which require speed and leg drive, it was noted that the line of best fit for the means was such that the curve, instead of going steadily upward, starts back toward the mean performance of the lower classifications.

<sup>1</sup> The exponent value 6.67 was used in preference to 6.60 to facilitate measurements taken on the graph paper, since three divisions on the graph paper equalled one exponent value.

This seems quite natural in view of the physiological changes which take place in the girl beginning about the ages from twelve to fifteen. Heavy hips and thighs tend to slow down performance in events requiring speed and leg drive. Standing Three Hops for girls offers an illustration of this type of curve which has a *doubling-back* tendency. (See Figure 2.)

It was discovered also that in a number of the events the standard deviation value of the performances increased as boys and girls became older, taller, and heavier. That is to say, a larger range of performance among older boys and girls than among the younger children should be expected. Accordingly, in the events where this fact was evident, standard deviations were plotted and a smooth curve or line of best fit

was drawn through the plotted points. This is illustrated in the standing broad hop for boys in the upper part of Figure 3. In a few of the events, the standard deviations show a decreasing tendency. Just why this should be true it is not possible to say, but standard deviations were again plotted and the line of best fit drawn as in the case of the means. The potato race for boys in the lower part of Figure 3 illustrates this procedure.

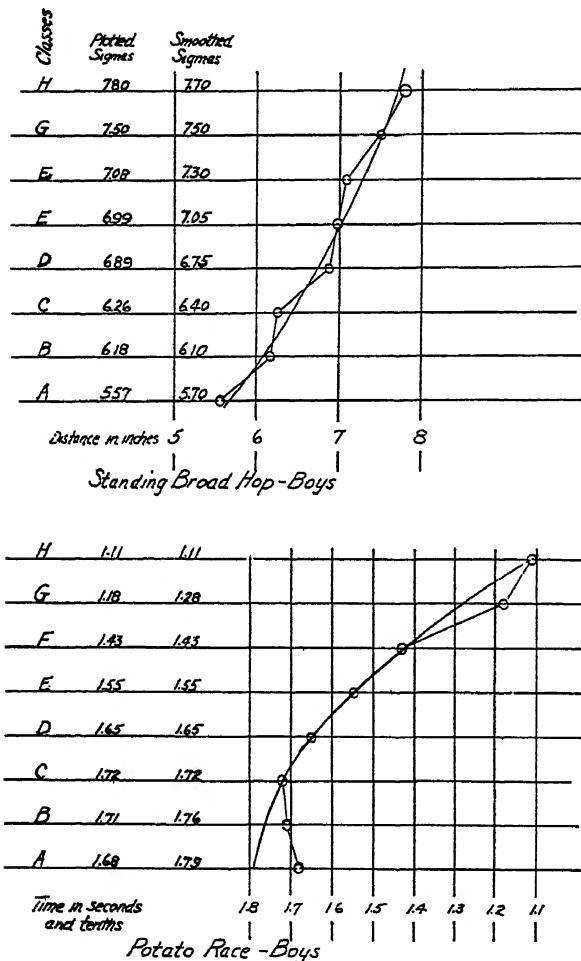

Fig. 3. Showing examples of increasing and decreasing standard deviations.

Table I shows a list of the events arranged in alphabetical order and the nature of standard deviation. The standard deviations for certain events were found to be fairly uniform and in such cases the average was used; in other cases an increasing or decreasing tendency was noted. Table II shows a sample of each type of standard deviation.

TABLE I

## Nature of Standard Deviation of Performance for Each Event

No.	Event	Event listed for	Type of standard deviation		
			Uniform	Increasing	Decreasing
1	Ball Put	Boys	Boys		
2	Base Running	Boys & Girls	Boys & Girls		
3	Basketball Throw for Distance	Boys & Girls	Boys & Girls		
4	Basketball Throw for Goal	Boys & Girls		Boys & Girls	
5	Basketball Throw for Goal (Special Event)	Boys		Boys	
6	Hobble Race	Boys & Girls			Boys & Girls
7	Jump and Reach	Boys & Girls	Boys	Girls	
8	Playground Baseball Throw for Accuracy	Boys & Girls		Girls	Boys
9	Playground Baseball Throw for Distance	Boys & Girls		Boys & Girls	
10	Potato Race	Boys & Girls	Boys		Boys
11	Pull-up	Boys		Boys	
12	Push-up	Boys		Boys	
13	Run and Catch	Boys & Girls	Boys		
14	Run—40 Yards	Boys & Girls	Boys & Girls		
15	Run—50 Yards	Boys & Girls	Boys & Girls		
16	Run—60 Yards	Boys & Girls	Boys & Girls		
17	Run—75 Yards	Boys	Boys		
18	Running Broad Hop	Boys	Boys		
19	Running Broad Jump	Boys		Boys	
20	Running High Jump	Boys			
21	Soccer Dribble	Boys & Girls	Boys		Girls
22	Soccer Kick for Distance	Boys & Girls	Boys & Girls		
23	Soccer Place Kick for Accuracy	Boys & Girls		Boys & Girls	
24	Soccer Throw-In for Distance	Boys & Girls		Boys & Girls	
25	Standing Broad Hop	Boys & Girls		Boys & Girls	
26	Standing Broad Jump	Boys	Boys		
27	Standing Broad Step	Boys & Girls	Boys & Girls		
28	Standing Double Broad Jump	Boys		Boys	
29	Standing Hop, Step and Jump	Boys		Boys	
30	Standing Leap and Jump	Boys & Girls		Boys & Girls	
31	Standing Three Hopa	Boys & Girls	Boys	Girls	
32	Standing Triple Broad Jump	Boys		Boys	
33	Standing Whole Hammon	Boys		Boys	

## CONSTRUCTION OF THE ACHIEVEMENT SCALES

It is well known that as the upper ranges of performance are reached it becomes increasingly difficult to make better performance records. In recognition of this fact *increased increment* scales<sup>1</sup> have been devised which award proportionately higher scores as better performances are made. It is not deemed advisable to use the *increased increment* type of scale in this study because of the fact that each "age-height-weight" class has been considered separately and forms a

<sup>1</sup> Frederick W. Cozens. "A Curve for Devising Scoring Tables in Physical Education," *Research Quarterly, American Physical Education Association*, Volume II, No. 4 (December, 1931), pp. 67-75;

very homogeneous unit in the entire group. In formulating the achievement scales in this volume a variation of the T-Scale<sup>1</sup> has been used which bases the scale on a range in standard deviation values on each side of the mean.

Table II

## Examples of Uniform, Increasing, and Decreasing Standard Deviations

Uniform Run, 40 Yards—Girls		Increasing Standing Broad Hop—Boys			Decreasing Hobble Race—Boys		
Class	Computed Sigma	Class	Plotted Sigma	Smoothed Sigma	Class	Plotted Sigma	Smoothed Sigma
A	.507	A	5.57	5.70	A	1.23	1.25
B	.545	B	6.18	6.10	B	1.26	1.25
C	.533	C	6.26	6.40	C	1.26	1.25
D	.470	D	6.89	6.75	D	1.20	1.20
E	.522	E	6.99	7.05	E	1.14	1.15
F	.493	F	7.08	7.30	F	1.09	1.10
G	.636	G	7.50	7.50	G	1.11	1.075
H	.486	H	7.80	7.70	H	1.015	1.05
Average	.524						

In setting up an achievement scale, one of the first considerations is the range of the scale. As has been noted elsewhere, any one of a variety of plans may be used, depending on the purpose of the scale.<sup>2</sup> If a T-scale (or variation) is used, the upper limit is set at a distance 5 times the value of the standard deviation above the mean and the lower limit at the same distance below the mean. The scale under such conditions really resolves itself into one in which the upper limit is much too hard to attain and the lower limit much too easy. As a matter of fact, with a T-scale, practically all of the scores range between 20 and 80. This renders both the upper and lower ends of the scale practically valueless because few scores are recorded in these ranges.

A scale constructed in the same general manner as a T-scale, but with a range of only three times the standard deviation on either side of the mean includes in a normal distribution 997 out of 1000 cases. Furthermore, a much larger proportion of scores will be found at the extremes of such a scale.

All of the scales, therefore, have been set up in such a manner that a score of 50 is the performance level at the mean or average, a score of 100 at 3 standard deviations above the mean and a score of 0 at 3 standard deviations below the mean. Increments for each score

<sup>1</sup> William A. McCall. *How to Measure in Education*. New York: The Macmillan Company, 1922, Chapter X.

<sup>2</sup> Frederick W. Cozens. "Test Scoring in Physical Education." *Journal of Health and Physical Education*, Volume 1, No. 10, December, 1930, pp. 16, 17, 52, 53.

increase were computed by dividing three times the value of the standard deviation by 50.

For example, in the Standing Broad Hop for Boys, Class H, the standard deviation was found to be 7.70 inches. Three times this amount, or 23.1 inches, is the distance from the mid-score, 50, to the upper range of the scale, and one-fiftieth of 23.1 inches, or .462 inches represents the increment for unit on the scale. For each score increase, that is, from 50 to 51, or 77 to 78, etc., .462 inches is added. For a score of 50, the corresponding performance record was 5 feet 11.8 inches, that is, the mean. This is noted on the scale to the nearest inch (6' 0"). To obtain the performance record for a score of fifty-one, .462 inches is added to 5 feet 11.8 inches, securing 6 feet 0.262 inches. Adding still another increment for a score of 52, 6 feet 0.724 inches is obtained. This performance record will not be as close to 6 feet 1 inch as the next record, that is, the one for 53 which will be 6 feet 1.186 inches. Therefore, the score for a performance record of 6 feet 1 inch will be found as 53.

Each scale has been constructed in this fashion, making a given score, such as 66, on one scale have the same relative value as the same score on any other scale. This fact means that scores in various events can be added or averaged to get the total or average achievement.

#### SPECIAL TREATMENT OF DATA IN A FEW EVENTS

In certain events, the nature of the data was such that scales could not be constructed on the same basis as in the other events. These include Basketball Throw for Goal, Playground Baseball Throw for Accuracy, Pull-Up, Push-Up, and Soccer Place Kick for Accuracy. Here the distributions are badly skewed, thus materially raising the size of the standard deviations and thereby warping the scale so that in reality it does not fit the distribution as in other events.

With the events named it was necessary to consider two items:

1. The nature of the skewness;
2. The size of the standard deviation and its relation to the range of the distribution.

It is well known that in a normal distribution the range of performance closely approximates three standard deviations on each side of the mean. Since, because of skewness, this is not true of the particular distributions in question, it was deemed advisable to estimate the size of the standard deviation which would fit the range of the distribution below the mean, and one which would fit the range above the mean. These measures were obtained by dividing each range (that is, above and below the mean), by three and using the quotients thus obtained in place of the computed standard deviation values. Because of this treatment it will be noted that score values above and below the

mean are not equivalent, but it must also be kept in mind that the range of performance is adequately covered in each scale.

In the Basketball Throw for Goal, the skewness is positive, that is, there is a tail at the upper end of the distribution. In the Playground Baseball Throw for Accuracy (boys) the skewness is negative, the tail being at the lower end of the distribution while in the same event for girls the skewness is slight but positive. The Push-Up and Pull-Up are events in which the distributions are badly skewed positively.

In the Soccer Place Kick for Accuracy (boys) there were so many perfect performances that the scale does not reach above a scale score of 70-79. In other words, the test was too easy and did not discriminate between abilities in the upper ranges of performance, and hence a pupil should not be able to score 100 on a test of this kind. This particular event is harder for girls and although there are some perfect performances, the scale score values will naturally be higher than in the same event for boys.

In the construction of these scales there has been used the only feasible and reasonable method after a careful study of the data and the requirements for this particular research.

### RELATION OF ACHIEVEMENT SCORES TO PERCENTAGES

In order to evaluate achievement scores in terms of the percentage of pupils above or below a given score, a method with which the classroom teacher may be more familiar, Table III has been prepared to indicate the score a boy or girl must have to be classed in a given percentage range, such as the upper or lower 5, 10, or 25 per cent. It will be noted that a much larger percentage of the cases is to be found between scores of 80-85 than between scores of 85-90, and a much larger percentage between 85-90 than between 90-95, etc. In a way, this takes care of the increased value which should be given to performances in the upper ranges.

#### Examples:

Suppose a girl makes a score of 80 on some test. Where may the teacher rank her in relation to all those who take the same test? By referring to columns 1 and 2, we note that she is in the upper 5 per cent. Column 4 will rank her more closely—the upper 3.6 per cent, that is, only 3.6 per cent of the girls who take the test are likely to do as well or better.

Suppose another girl in the same test makes a score of 30, where may she be ranked? Columns 1 and 2 give this ranking roughly as almost the lower 10 per cent. Column 4 gives the ranking more closely as the lower 11½ per cent. Theoretically, only 11½ per cent of all the girls who take the test are likely to do as poorly or worse.

Table III

## Relative Position of Achievement Scores in Terms of Percentages of Scores Better or Worse in a Normal Distribution

<i>Scores</i>	<i>Position of Score</i>	<i>Scores</i>	<i>Position of Score</i>
77 or above	Upper 5%	95	Upper $\frac{1}{8}$ of 1%
71 or above	Upper 10%	90	Upper 8/10 of 1%
64 or above	Upper 20%	89	Upper 1%
61 or above	Upper 25%	85	Upper 1.8%
57 or above	Upper $\frac{1}{4}$	84	Upper 2%
Between 39 and 61	Middle 50%	81	Upper 3%
Below 43	Lower $\frac{1}{8}$	80	Upper 3.6%
Below 39	Lower 25%	75	Upper 6.67%
Below 36	Lower 20%	70	Upper 11 $\frac{1}{4}$ %
Below 29	Lower 10%	65	Upper 18 $\frac{3}{4}$ %
Below 23	Lower 5%	60	Upper 27 $\frac{1}{4}$ %
		55	Upper 38 $\frac{3}{4}$ %
		45	Lower 38 $\frac{3}{4}$ %
		40	Lower 27 $\frac{1}{4}$ %
		35	Lower 18 $\frac{3}{4}$ %
		30	Lower 11 $\frac{1}{4}$ %
		25	Lower 6.67%
		20	Lower 3.6%
		19	Lower 3%
		16	Lower 2%
		15	Lower 1.8%
		11	Lower 1%
		10	Lower 8/10 of 1%
		5	Lower $\frac{1}{8}$ of 1%
